This is Paro. Paro is our therapeutic robot that teaches children and students about the importance of empathy and compassion through technology that's safe and healthy for children. Paro has sensors all over it that allows it to be attuned and responsive to the needs of children through touch. Paro can go into hospitals, Paro can go into early learning environments. Paro can go anywhere that animals can't. I brought a robot into our program because I think it's really important that we provide students the opportunity to think about technology and engage with technology in new ways. Technology is changing and growing quickly and it's our responsibility as Early Childhood professionals to be on top of that, to understand how the world is evolving, to create safe environments for our children. And I hope this broadens their perspective on life and their profession and technology and the use of it within the lives of children in healthy ways. I think Paro agrees.
